ScaffClamp
Temporary scaffold clamp

AZ-300
Temporary scaffold clamping device, this unique design grips to both vertical and horizontal scaffold pipes. This gives more opportunity to quickly provide a secure temporary anchor point for a worker to attach onto, given there is normally a secure vertical scaffold pipe available before horizontal bracing is installed.

Features

- Grips securely, which increases when more force is applied.
- Pincer action opening.
- For pipes of diameter 44.5mm to 50mm.
